RUGGED CONSTRUCTION

All welded construction and stainless steel surfaces makes the X70 ideal for corrosive environments. The transmitters O-ring free design ensures reliability with corrosive media. Viatran's X70 FM approved labelled units are designed to meet NEC/API Dual Seal

requirements. For most applications requiring field adjustments, Model 571 is also hermetically sealed, with magnetically coupled adjustments to eliminate contamination from liquid or gas intrusion. For the most corrosive environments, Hastelloy, Inconel, and 316 SS wetted parts are available.

OVERPRESSURE PROTECTION

Models 570, 770 and 870 all feature bonded foil strain gage sensors. The over pressure protection in this technology helps to eliminate damage to the sensors when they are exposed to transient pressure spikes. Viatran also offers isolation diaphragms and oil fills for specific application requirements.

PRESSURE MEASUREMENT SOLUTIONS

You'll find complete specifications on the following pages to help you select the right X70 transmitter for your application. Viatran offers a full line of pressure measurement products for the process control industry including a "low power" version of the X70 which draws less than 1 mA of current.
