XPM6

Miniature pressure sensor

SPECIFICATIONS

- Ranges 20 to 1000 bar [300 to 15k psi]
- Sealed and gauge pressure reference
- Stainless steel housing
- Linearity $\pm 0.25\%$ F.S.
- Very low mass, approximately 10 grams without cable (dependent on options)

The **XPM6** is a miniature transducer designed to measure static and dynamic pressure under a wide variety of conditions, including hostile environments. It is made of stainless steel and is available in standard ranges from 0-20 to 1000 bars [300 up to 15000 psi].

The **XPM6's** sensing element is a fully temperature compensated Wheatstone bridge made with high stability micro-machined silicon strain gauges. Also available is option MH, which provides protection up to 1000°C [1832°F] for thermal flashes or explosive testing by the addition of extra protection into the diaphragm.

The **XPM6** incorporates a specific feature, which virtually eliminates zero shifts caused by installation torque.

A **PT1000** temperature probe is optionally available as a custom design.

On request, instruction documents can be provided to ease the selection and use of our sensors and provide helpful tips.
