

ANTI-VIBRATION WEIGHING ASSEMBLY FOR HARSH ENVIRONMENTS

capacities 300 - 10,000kg

NEW
CAPACITIES

Ideal for applications with mixing, agitation and vibration, this stainless steel assembly is designed to reduce the vibration transmitted to the load cell. It is typically used in weighing platforms, big bag (FIBC) filling, belt weighers and hopper/tank weighing in the Food Processing, Chemical, Pharmaceutical and Bulk Handling industries.

The stainless steel, OIML C3 approved, model T85 load cell used in this anti-vibration weighing assembly is fully welded and hermetically sealed for protection to IP68 and IP69K, allowing it to be used in extremely harsh environments. The complete assembly consists of a load cell, mounting stud, baseplate with spacer and stainless steel/elastomeric anti-vibration disc.

ATEX certification, for both gas and dust zones, is available for the T85 load cell. To reduce costs, certification for use in dust zones 20, 21 and 22 without safety barriers is available.

For applications in aggressive environments where stress corrosion or acid attack is an issue, a special Parylene coating for the load cell can be specified as an option. Other options are custom load cell cable lengths for volume OEM customers and a version for high temperature use.

- Stainless steel load cell & mounting accessory
- Hermetically sealed, fully welded construction
- Simple, fast installation
- Sealed to IP68 / IP69K
- 3000 divisions OIML R60 Class C (C3)
- 5 year warranty
- High Integrity cable entry
- High durability polyurethane load cell cable
- Load cell options of  approval, Parylene coating or high temperature version

Wiring diagram (using T85 load cell)

Electrical Connections

Via 4 core, 5.7mm diameter, screened polyurethane cable.

Screen not connected electrically to load cell.

Construction

T85 load cell: stainless steel

Other components: stainless steel and elastomer (rubber)
